

Feeding the World with GM Crops: Myth or Reality?

Feeding the World with GM Crops: Myth or Reality?

June 2008, by GM Freeze, UK

The recent sharp rises in world food and feed prices have been used by some to call for GM crops to be more widely grown because they yield more than conventional crops and therefore would feed more people. This briefing examines the evidence base for such claims, the underlying causes of the current crisis and looks briefly at the solutions.
